

BrainSafe AI

Does it reach the brain, and what does it do when it gets there?

A target score is admitted only in proportion to predicted exposure, so potency a compound cannot reach contributes nothing.

of 75 trained

cross-validation,
calibrated and
conformal

Validated, calibrated, and honest about its limits:

negative class recovered from measurement, not decoys · thresholds set on a pool disjoint from the one that measures them · every validation reported whichever way it falls
