

A

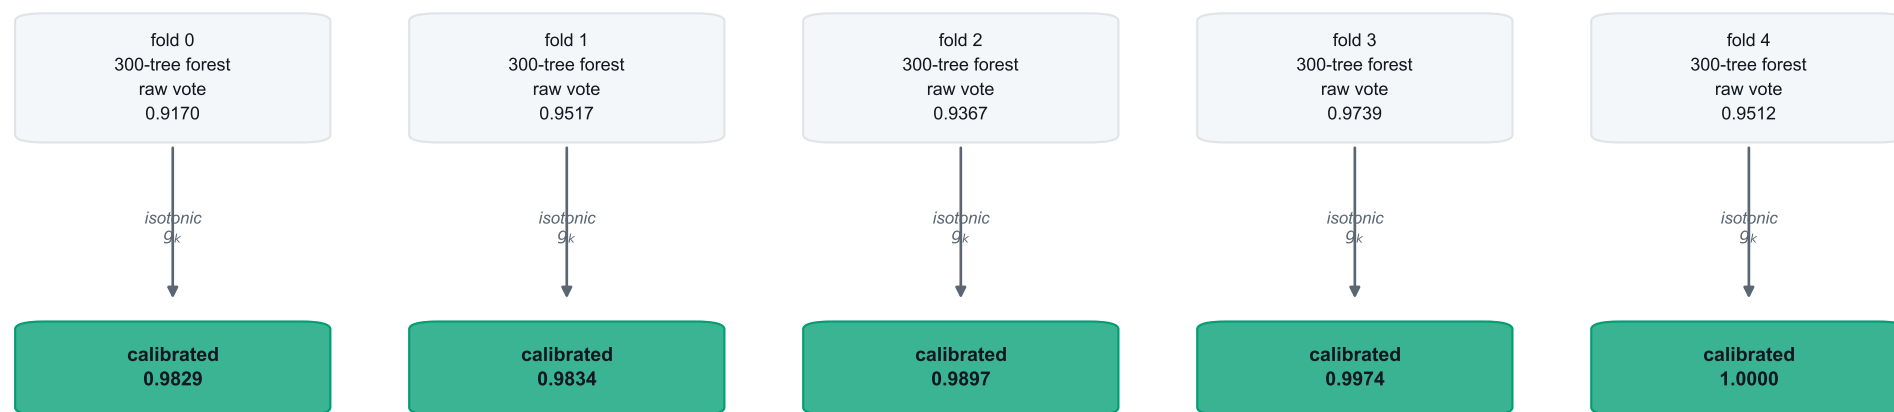

one tree's vote for donepezil (tree 0, fold 0 of the BBB model, shown to depth 3 of 38)

B

the deployed probability: five folds' calibrated votes, averaged

$$\hat{p}(x) = \frac{1}{5} \sum_{k=1}^5 g_k(\hat{p}_{\text{forest},k}(x))$$

deployed probability = mean of 5 folds = 0.9907
matches app.py's own live output for donepezil (0.9907)
