

# BrainSafe AI

*does a molecule reach the brain, and what does it do once it is there?*

*a target score is admitted only in proportion to predicted exposure, so potency  
the compound cannot reach contributes nothing*

228,200 measured compound-endpoint records · 54 molecular targets plus exposure, ADME and safety · 70 of 75 trained estimators deployed · scaffold-held-out, calibrated and conformal

negative class recovered from measurement, not decoys · thresholds set on a pool disjoint from the one that measures them · every validation reported whichever way it falls

freely available, no registration · [huggingface.co/spaces/Krishnag999/brainsafe-ai](https://huggingface.co/spaces/Krishnag999/brainsafe-ai)
